

HIRESTREAM OVERSEAS PLACEMENT PORTAL HPSEDC

End-to-End Recruitment Workflow Status

CURRENT NODE SYNC MATRIX VERIFICATION

Following the successful validation and remediation of the Recruitment Agency dashboard routing logic, the active tracking pipeline status is mapped below:

Step 1: Candidate App

[RESOLVED]

Applications successfully commit to server streams and propagate to intermediate dashboards natively.

Step 2: Agency Shortlist

[RESOLVED]

The Recruitment Agency Panel (HimAbroad View) correctly receives live records, allowing operators to screen and select candidate models smoothly.

Step 3: Employer Offer

[DEFECT OPEN]

The final closing workflow locks up when corporate partners attempt to generate or attach placement offer letters for selected profiles.

Issue 1: Mobile App Timeline Tracking Milestone Lock

FRONT-END PROGRESS INDICATOR FAILS TO MAP DYNAMIC DATABASE CHANGES

UAT Test Observations:

- **Notification Layer Success:** The app successfully pushes text alerts to the user device's notification log (e.g., *"Your interview for Web Developer is scheduled for 29/5/2026"* as verified in Figure 2).
- **Application Status Milestone Fail:** Opening the individual job's **Application Detail** page (Figure 1) shows that the interactive visual nodes (Applied → Under Review → Shortlisted → Interview) remain grey and unadvanced.
- **Required Technical Fix:** Ensure the front-end step indicator components are properly bound to the active database parameters that handle system alerts.

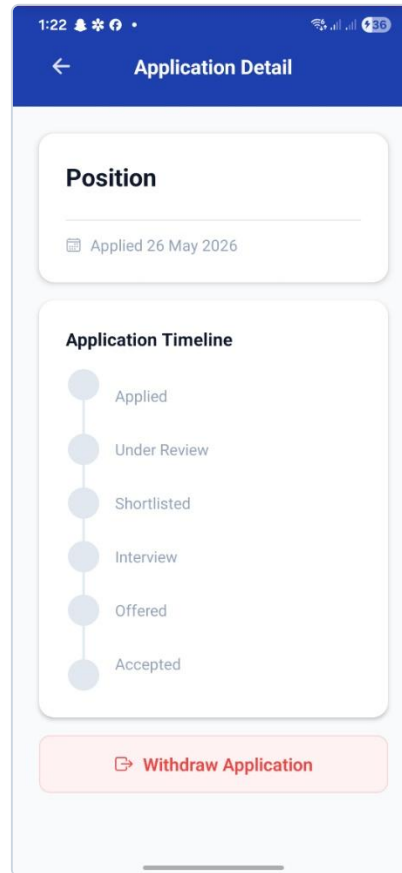

Figure 1: Unadvanced progress milestones view.

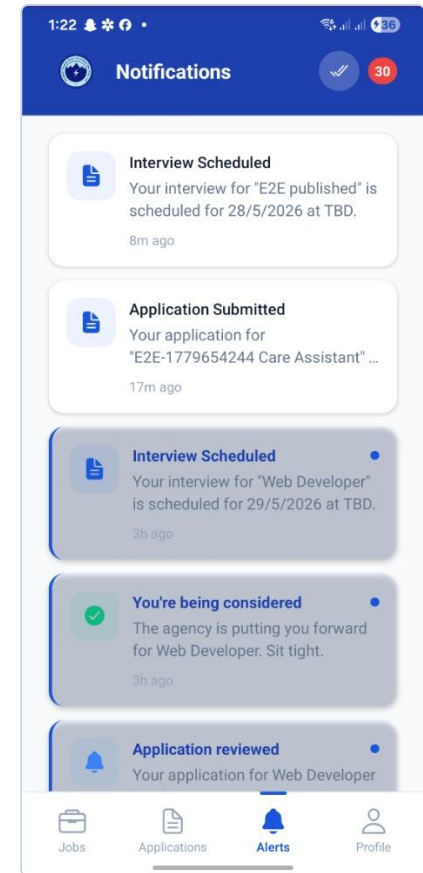

Figure 2: Logged active text alerts on client device.

Issue 2: Placement Offer Letter Generation Block

SYSTEM FAILS TO PROCESS AND ADD OFFERS FOR SELECTED CANDIDATES

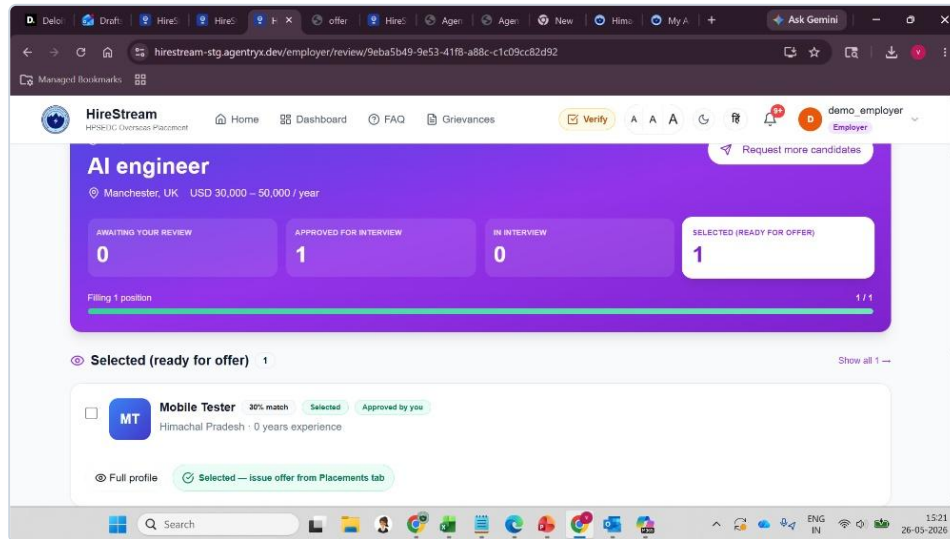

Exhibit 1: Employer Portal showing "Selected - issue offer from Placements tab".

When a candidate is marked as ****Selected**** (e.g., 'Mobile Tester'), the platform prompts the employer to clear the offer letter creation directly from the dedicated Placements management tab.

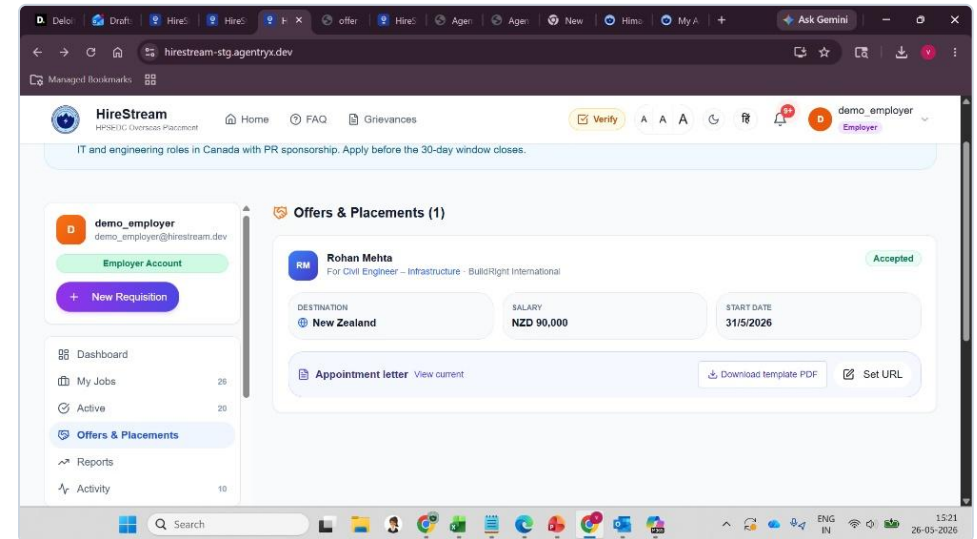

Exhibit 2: Offers & Placements Portal broken template execution loop.

Functional Defect Found:

Navigating to the ****"Offers & Placements"*** tab reveals that the platform is ****unable to generate, render, or add new placement offer letters****. Clicking the template triggers an execution loop or fails to append data models, preventing employers from finalizing successful candidate onboarding pipelines.

Technical Deliverables Action Plan

URGENT DEFECT CORRECTION MATRIX FOR PLATFORM ENGINEERING VENDOR

The vendor's software development team must patch and verify the following remaining items in the next build deployment:

Target Module	Technical Defect Root Cause	Required Fix Resolution
Application Milestone Track	Visual progress bar circular tracking components are disconnected from active database attributes and sit entirely greyed out.	Map the tracking step indicators to the backend property tables driving mobile text alerts.
Offer & Placement Module	The Offers & Placements configuration fails to append new records or bind with the `Download template PDF` or `Set URL` functions.	Fix the document assembly service and asset endpoints handling offer letter record creation.
