1 Introduction

1.1 Purpose

This Software Requirements Specification (SRS) defines the design of the **Overseas Placement Portal & Mobile Application** (product name *HireStream*) developed by M/s HTIS Telecom Private Limited for HPSEDC. It elaborates how each requirement of the HPSEDC **Functional Requirements Specification (FRS)** is realised in the system architecture, data design, functional modules, user interface, external interfaces, and non-functional characteristics.

This document is submitted as the principal deliverable for **Work Order Payment Term 1 — "Approval of design (based on deliverables SRS/FRS) by the department" (40%)**. It is

intended to be reviewed and approved by the concerned department of HPSEDC.

1.2 Scope

The system is a secure, bilingual, web and mobile platform that facilitates **regulated overseas employment** for the youth of Himachal Pradesh. It connects three primary actors — **Job Seekers (Candidates)**, **Recruiting Agencies**, and the **HPSEDC Administrator/Authority** — to streamline job matching, reduce migration risk, and promote safe, regulated international employment.

In scope (per FRS §1.2):

- User registration and profile management for job seekers and recruiting agencies.
- Document upload by candidates (CV, passport, certificates).
- Job posting, searching, and applying for jobs.
- Scrutiny of candidates and scheduling of recruitment drives and interviews by recruiting agencies.
- Entry of placement details and issuing of appointment letters to selected candidates by the recruiting agencies.
- Acceptance and confirmation of job offers by candidates.
- Support features: dashboards, FAQs, grievances, notifications, informational resources.
- Administrative tools for content management, approvals, reporting, and admin oversight.
- Bilingual interface (English and Hindi).

1.3 Definitions, acronyms and abbreviations

Term	Meaning
FRS	Functional Requirements Specification (HPSEDC-supplied contract spec)
SRS	Software Requirements Specification (this document)
Job Seeker / Candidate	Individual seeking overseas employment opportunities
Recruiting Agency / Agent	Entity requesting/sourcing candidates for overseas placement
Employer	Overseas employer entity whose requisitions agencies fulfil (modeled distinctly from agency, see §3.3)
Administrator / HPSEDC Authority	Authorised HPSEDC personnel managing and overseeing the portal
GIGW	Guidelines for Indian Government Websites
HIM Access / HIM Parivar	Government of Himachal Pradesh Single Sign-On service (himparivar.hp.gov.in)
RBAC	Role-Based Access Control
PII	Personally Identifiable Information
SDC	State Data Centre
PG	Performance Guarantee

2 Overall Description

2.1 Product perspective

HireStream is a self-contained, cloud-deployable platform comprising:

- A **responsive web application** (works on major browsers, smartphones and tablets).
- **Native mobile applications** for Android and iOS (API-driven; mobile auth, config, and push endpoints are built into the backend).
- A **central application server** exposing a versioned REST API (`/api/v1`).
- A **relational database** holding all candidate, agency, employer, job, application, placement, and administrative data.

The platform is designed to be hosted on government cloud / State Data Centre infrastructure in conformance with the Dept. of IT (GoHP) hosting instructions [ref. 5].

2.2 Product functions (FRS §2.1)

- Secure user registration and profile creation.
- Job postings by verified recruiting agencies and targeted job searches by job seekers.
- Document upload, application submission, and application-status tracking.
- Informational and support services, including training notifications and grievance handling.
- Administrative dashboards for monitoring and reporting.

2.3 User roles and characteristics (FRS §2.2)

Role	Responsibilities	Key module capabilities
Candidate	Register, upload documents, apply for jobs, track status	Registration & login (OTP / email-mobile verification; SSO via HIM Access), profile & document management, job search & one-click apply, application tracking, notifications, offer acceptance, grievances
Recruiting Agency	Register, post jobs, view applicants, schedule drives & interviews, manage placements	Agency registration & license info, job posting, candidate management (shortlist/scrutiny), recruitment-drive & interview scheduling, placement entry & appointment letters, visa/passport assistance

Role	Responsibilities	Key module capabilities
HPSEDC Administrator / Authority	Approve agency registrations, approve recruitment drives, overall portal management, reporting	Agency & drive verification/approval, MIS dashboard, reporting by district/agency/skill/placement status, content management, grievance oversight, audit oversight

2.4 Operating environment

- **Client:** any modern browser (Chrome, Firefox, Edge, Safari) on desktop, tablet, or smartphone; Android and iOS native apps.
- **Server:** Linux host running Node.js (process-managed by PM2) behind an Nginx reverse proxy with TLS termination.
- **Database:** PostgreSQL.
- **Deployment target:** government cloud / SDC, horizontally scalable.

2.5 Design and implementation constraints (FRS §2.9)

- Data encryption in transit (HTTPS/TLS) and at rest for sensitive fields; compliance with GDPR/PDPA-equivalent data-protection principles and **GIGW** guidelines.
- Custom development limited to essential features; open-source, well-maintained libraries leveraged where possible.
- Bilingual (English + Hindi) interface.
- Accessibility provisions for *divyangjans* and uniformity with the State Government website header (GIGW).

2.6 Assumptions and dependencies

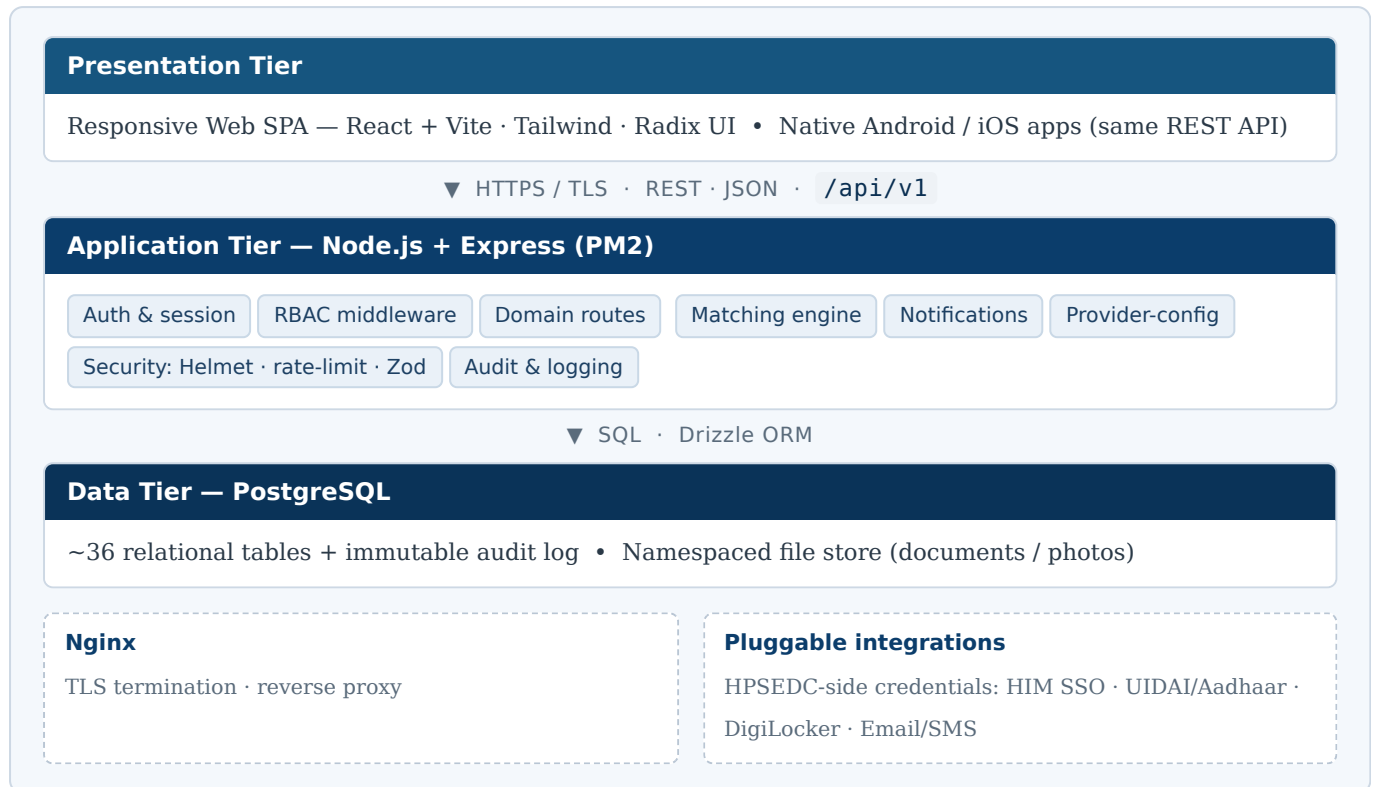

The following are **HPSEDC-side deliverables / dependencies**, designed for in the architecture as pluggable, admin-configurable interfaces and to be activated when HPSEDC provides production credentials/endpoints:

- HIM Parivar / HIM Access SSO endpoint and client credentials.
- Aadhaar / UIDAI verification API access.
- DigiLocker integration credentials.
- Email and SMS gateway provider credentials.
- CERT-In empanelled external security audit (post-staging).

3 System Architecture & Design

3.1 Architectural style

The system follows a **modular, layered, client-server architecture** with a clear separation between presentation, application, and data tiers:

FIGURE 1 — LOGICAL SYSTEM ARCHITECTURE

3.2 Technology stack

Layer	Technology
Web frontend	React 18, Vite, Wouter (routing), TanStack Query, React Hook Form + Zod, Radix UI / shadcn components, Tailwind CSS, Recharts, i18next (bilingual)
Backend	Node.js, Express, TypeScript
Auth & security	passport / passport-local, express-session (PostgreSQL-backed, rolling idle timeout), OTP (otplib / input-otp), JWT (mobile), bcrypt, Helmet, express-rate-limit
Data access	Drizzle ORM, drizzle-zod (schema-derived validation)
Database	PostgreSQL
Documents / media	Multer (uploads with magic-byte verification), Archiver (bulk export), PDFKit (PDF generation), QRCode
Notifications	In-app notifications; Nodemailer (email) and SMS via pluggable provider adapters
Scheduling / ops	node-cron (digests/SLA jobs), Winston (structured logging), systeminformation (health)
Mobile	API-driven Android/iOS; mobile auth (refresh tokens), config, and push-token endpoints

3.3 Logical module decomposition

The application server is decomposed into domain route modules and supporting services. Principal modules:

- **Authentication & Identity** — registration, login, OTP/email-mobile verification, HIM Access SSO hook, 2FA, password reset, mobile auth.

- **Candidate** — profile wizard, education/experience, document management, self-service, public status check.
- **Job & Application** — job listing/search/filter, apply, application lifecycle, notes, matching engine.
- **Recruiting Agency** — agency registration, job posting (derivative jobs), applicant management, drives, interviews, placements, productivity.
- **Employer** — requisition posting, review queue (aggregated across agency derivatives), approve-for-interview, welfare notes, placement readiness.
- **HPSEDC Administrator / Authority** — agency & drive approval, oversight, reporting/MIS, content (FAQ, announcements, training events), audit.
- **Superadmin / Operations** — system settings, provider configuration, system controls, data-management operations.
- **Cross-cutting services** — matching engine, notifications, document/upload handling (namespaced storage), grievance handling, audit logging.

3.4 Deployment architecture

- **Reverse proxy:** Nginx terminates TLS, enforces upload size limits per virtual host, and proxies to the Node.js application.
- **Application process:** managed by PM2 (restart/monitoring).
- **Database:** PostgreSQL with role-scoped access.
- **Static & media:** public assets and candidate photos served from a public path; sensitive documents served only through authenticated, authorisation-gated endpoints.
- **Hosting:** designed for government cloud / SDC; scalable horizontally behind the reverse proxy.

4 Data Design

4.1 Overview

The relational schema comprises approximately **36 tables** plus an immutable **audit log**. The principal entities and relationships:

Entity (table)	Purpose	Key relationships
users	Account + role (candidate / agent / employer / admin / superadmin)	1-1 with role profile tables
candidates	Candidate profile, contact, address, preferences, photo	belongs to users ; has many documents, education, experience
candidate_education , candidate_experience , candidate_references	Qualifications, work history, references	belong to candidates

Entity (table)	Purpose	Key relationships
documents	Uploaded candidate documents (CV, passport, certificates)	belong to candidates
recruitment_agents	Recruiting agency profile, licence info, verification status	belongs to users ; has many jobs, drives
agency_documents , agency_reviews	Agency licence docs and ratings	belong to recruitment_agents
employers , employer_documents	Overseas employer entities and their documents	post requisitions
jobs	Job openings / requisitions (incl. derivative jobs picked up by agencies)	belong to agency/employer; have many applications
applications	Candidate application to a job; status lifecycle	link candidates ↔ jobs
application_notes	Internal notes / scorecards on applications	belong to applications
recruitment_drives	Drive scheduling	belong to agencies
interviews	Interview scheduling, results, scorecards	belong to applications
placements	Placement details, offer/appointment, welfare, deployment	belong to applications
grievances	Candidate grievances and resolution	belong to users
notifications , notification_templates , email_templates	In-app + templated communications	belong to users
saved_jobs , saved_searches , saved_segments	Candidate/agent convenience features	belong to users
faq , announcements , training_events , country_info	Informational content	admin-managed
system_settings , provider_config	Configurable behaviour + encrypted integration credentials	global
otp_codes , password_reset_tokens , mobile_refresh_tokens , mobile_push_tokens	Auth + mobile session artefacts	belong to users
candidate_agent_tags	Agent-applied candidate tags	link candidates ↔ agents
audit_log	Immutable record of all significant actions/transitions	references actor + resource

4.2 Data integrity & retention

- Foreign-key constraints enforce referential integrity; sensitive deletes are constrained.
- All significant state changes are written to `audit_log` (actor, action, resource, timestamp) for traceability and reporting.
- PII fields are protected by RBAC and encryption; integration credentials in `provider_config` are stored encrypted.

5 Functional Design (per FRS workflows)

The following sub-sections map directly to the FRS workflow diagrams (FRS §2.3–§2.7) and describe how each is implemented.

5.1 Candidate registration & profile management (FRS §2.3)

Registration (Aadhaar/email-mobile verification, OTP, optional HIM Access SSO) → Profile creation (personal, education, experience) → Document upload (CV, passport, certificates) → Profile maintenance (job role & country preferences).

Implemented via the authentication module + a guided **profile wizard**, document module (typed uploads with format/size and magic-byte verification), and candidate self-service. Public **status check** allows status lookup without login.

5.2 Job search & application (FRS §2.4)

Browse openings → advanced filters (location, sector, salary, experience) → view job description → submit application (one-click, tailored documents) → track status → receive notifications.

Server-side filtering (including salary range), one-click apply, and an application-status timeline. A matching engine scores candidate-job fit on multiple weighted factors.

5.3 Recruiting-agency registration & job posting (FRS §2.5)

Agency registration (company + licence details) → licence verification & HPSEDC admin approval → job posting → manage postings (edit/update/close) → view & manage applicants → analytics.

Agencies register and submit licence documents; HPSEDC admin verifies and approves before the agency can post. Agencies pick up employer requisitions, creating **derivative job postings** visible to candidates.

5.4 HPSEDC Admin verification & approval (FRS §2.6)

Document verification of recruiting agencies → agency approval/rejection → system monitoring → report generation → grievance handling.

The admin/authority module provides agency & drive approval queues, oversight dashboards, MIS reporting, and grievance management, all backed by the audit log.

5.5 Recruitment process (FRS §2.7)

Organize recruitment drives → review applications → shortlist candidates → schedule interviews → conduct interviews & record results → make selection → issue appointment letters.

Application state machine

From → To	Actor	Notes
(none) → submitted	Candidate	On apply
submitted → reviewed	Agent	Candidate sees "Viewed"
reviewed → shortlisted	Agent	Surfaces in Employer Review Queue
shortlisted → interview_scheduled	Agent	Writes interview row
interview_scheduled → selected	Employer (primary, FRS §2.7)	Final selection
any active → rejected	Agent / Employer	Reason captured; employer name scrubbed from candidate-facing message (FRS §5)
selected → placed	Agent	Placement + appointment letter; candidate accepts offer
terminal → change	Admin only	Override

The **Employer Review Queue** aggregates shortlisted applicants across all derivative jobs of an employer's requisitions into one unified list. Placement entry, appointment-letter issuance, offer acceptance, welfare follow-up, and pre-departure readiness are supported on the placement record.

5.6 Overall workflow (FRS §2.7 "Overall")

User registration & verification → job posting & searching → recruitment drives → application & matching → interview & selection → placement & follow-up → reporting & monitoring .

6 User Interface / UX Design (FRS §3.1)

- **Navigation:** clean, responsive layout with primary menus (Home, Jobs, Register/Login, Apply, Support) and role-specific dashboards (Candidate, Agency, Employer, Admin, Superadmin).
- **Responsiveness:** mobile-first responsive web; native Android/iOS apps.
- **Bilingual:** English and Hindi via i18next, switchable at runtime.
- **Accessibility (GIGW / divyangjans):** semantic, accessible component library (Radix UI), keyboard navigation, screen-reader support, and conformance toward WCAG accessibility standards; State-Government header uniformity.
- **File uploads:** PDF/JPG/PNG up to size limits, with type and magic-byte verification.
- **Key screens (illustrative):** landing, auth, candidate dashboard & profile wizard, job listing & detail, application detail, agency dashboard & job/applicant management, recruitment drives, interviews, employer dashboard & review queue, admin dashboard & oversight, superadmin system controls, FAQ, grievances, public status check.

7 External Interface Requirements (FRS §2.8, §3.1)

All external integrations are designed as **pluggable, admin-configurable adapters**; production activation depends on HPSEDC-supplied credentials (see §2.6).

Interface	Design	Status
HIM Access / HIM Parivar SSO	OAuth/SSO login hook with admin-configured client credentials and callback	Adapter built; awaiting HPSEDC credentials
Aadhaar / UIDAI verification	Verification API adapter via provider-config	Adapter built; awaiting access
DigiLocker	Document fetch/upload adapter	Adapter built; awaiting credentials
Email gateway	Nodemailer / SMTP provider via provider-config	Built; configure provider
SMS gateway	Pluggable SMS provider via provider-config	Built; configure provider
MIS dashboard	Built-in admin MIS + reporting by district/agency/skill/placement status	Built
Software interfaces	File upload (PDF/JPG, ≤5 MB per FRS); secure REST APIs (JSON) for data exchange	Built

8 Non-Functional Design (FRS §3.2)

Attribute	Requirement (FRS)	Design response
Performance	Page load < 3s; 5,000 concurrent users; 99.9% uptime	SPA with client-side caching (TanStack Query), server-side filtering/pagination, indexed queries, stateless API behind a scalable reverse proxy
Security	RBAC; PII encryption; regular vulnerability scans; ISO 27001 alignment	RBAC middleware on every protected route; Helmet security headers; rate limiting; input validation (Zod); encrypted credentials; session hardening (rolling idle timeout); audit logging; CERT-In external audit planned post-staging
Usability	Intuitive UI/UX; mobile responsiveness; accessibility (screen readers)	Responsive design, accessible component library, bilingual support
Scalability	Cloud-based architecture for easy scaling	Stateless application tier, externalised sessions, horizontally scalable behind Nginx
Reliability	Data backups; user-friendly error handling	Structured error responses; database backup strategy on SDC; structured logging & monitoring

9 Standards & Compliance (FRS §2.9, Work Order §4-§6)

- **GIGW** conformance — accessibility for *divyangjans*, State-Government header uniformity, and content guidelines.
- **Data protection** — HTTPS/TLS in transit; encryption of sensitive data; GDPR/PDPA-equivalent principles.
- **Security audit** — internal security audit completed; **CERT-In empanelled external audit** to be undertaken post-staging; any audit observations to be resolved by the vendor per Work Order §4.
- **IT-dept hosting instructions** — deployment per Dept. of IT (GoHP) letter [ref. 5].
- **Maintainability & handover (FRS §3.3)** — modular code design; documentation for handover.
- **Testing (FRS §3.3)** — unit, integration, and **User Acceptance Testing** — UAT completed by the HPSEDC team (see UAT Final Report).

10 Requirements Traceability Matrix (FRS → Design)

Legend — **Status:** ✓ Implemented Designed & implemented · 🔗 Pluggable Designed; pluggable, HPSEDC-side credential pending.

FRS ref	Requirement	SRS / design section	Status
\$1.2	Registration & profile management (candidates, agencies)	\$5.1, \$5.3	✓ Implemented
\$1.2	Document upload by candidates	\$4.1, \$5.1	✓ Implemented
\$1.2	Job posting, searching, applying	\$5.2, \$5.3	✓ Implemented
\$1.2	Scrutiny & scheduling of drives/interviews by agencies	\$5.5	✓ Implemented
\$1.2	Placement details & appointment letters by agencies	\$5.5	✓ Implemented
\$1.2	Acceptance/confirmation of offers by candidates	\$5.5	✓ Implemented
\$1.2	Support: dashboards, FAQs, grievances, notifications, info	\$2.3, \$6, \$9	✓ Implemented
\$1.2	Admin tools: content mgmt, approvals, reporting, oversight	\$5.4	✓ Implemented
\$1.2	Bilingual interface (English + Hindi)	\$2.5, \$6	✓ Implemented
\$2.1	Secure registration & profile creation	\$5.1	✓ Implemented
\$2.1	Job postings by verified agencies + targeted search	\$5.2, \$5.3	✓ Implemented
\$2.1	Document upload, submission, status tracking	\$5.1, \$5.2	✓ Implemented

FRS ref	Requirement	SRS / design section	Status
\$2.1	Informational/support services incl. training & grievances	\$5.4, \$9	✓ Implemented
\$2.1	Admin dashboards for monitoring & reporting	\$5.4	✓ Implemented
\$2.2	Candidate module (registration, profile, search, apply, notifications)	\$2.3, \$5.1, \$5.2	✓ Implemented
\$2.2	Recruiting Agency module (registration, posting, candidate mgmt, drives, interviews, visa/passport assist)	\$2.3, \$5.3, \$5.5	✓ Implemented
\$2.2	HPSEDC Authority module (approvals, dashboard, reporting)	\$2.3, \$5.4	✓ Implemented
\$2.3	Candidate registration & profile-management workflow	\$5.1	✓ Implemented
\$2.3	OTP authentication	\$3.2, \$5.1	✓ Implemented
\$2.4	Job application workflow (browse → filter → apply → track → notify)	\$5.2	✓ Implemented
\$2.5	Agency registration & job-posting workflow incl. licence verification & approval	\$5.3, \$5.4	✓ Implemented
\$2.6	Admin verification & approval workflow (doc verify, approve/reject, monitor, report, grievances)	\$5.4	✓ Implemented
\$2.7	Recruitment process workflow (drives → review → shortlist → interview → select → appointment)	\$5.5	✓ Implemented
\$2.7	Overall workflow incl. placement & follow-up, reporting & monitoring	\$5.6	✓ Implemented
\$2.8	Web app (browsers) + responsive + iOS/Android apps	\$2.1, \$3, \$6	✓ Implemented
\$2.8	Aadhaar/UIDAI verification (API) — SSO (HIM Access)	\$7	ⓘ Pluggable
\$2.8	DigiLocker integration	\$7	ⓘ Pluggable
\$2.8	Email/SMS gateway integration	\$7	ⓘ Pluggable
\$2.8	MIS dashboard for administrators	\$5.4, \$7	✓ Implemented
\$2.8	Multilingual support	\$6	✓ Implemented
\$2.9	Data encryption (HTTPS/TLS) + GDPR/PDPA-equivalent + GIGW	\$8, \$9	✓ Implemented
\$2.9	Leverage open-source libraries; limit custom dev	\$3.2	✓ Implemented
\$3.1	Clean responsive UI with navigation menus	\$6	✓ Implemented
\$3.1	File upload (PDF/JPG ≤5 MB); email/SMS interfaces	\$7	✓ Implemented / ⓘ Pluggable
\$3.1	Secure APIs for data exchange	\$3.1, \$7	✓ Implemented

FRS ref	Requirement	SRS / design section	Status
§3.2	Performance (<3s, 5,000 users, 99.9%)	§8	✓ Implemented
§3.2	Security (RBAC, PII encryption, vuln scans, ISO 27001)	§8, §9	✓ Implemented
§3.2	Usability (intuitive, mobile, accessibility)	§6, §8	✓ Implemented
§3.2	Scalability (cloud-based)	§3.4, §8	✓ Implemented
§3.2	Reliability (backups, error handling)	§8	✓ Implemented
§3.3	Maintainability (modular, documentation/handover)	§3.3, §9	✓ Implemented
§3.3	Testing (unit, integration, UAT)	§9	✓ Implemented

Coverage summary: All FRS functional and non-functional requirements are designed and implemented. The four items marked **Pluggable** (HIM Access SSO, Aadhaar/UIDAI, DigiLocker, Email/SMS gateway) are fully designed as admin-configurable adapters and are pending HPSEDC-side production credentials per the agreed division of responsibilities.

11 Conclusion

This SRS demonstrates that the design of the Overseas Placement Portal & Mobile Application fully addresses every requirement of the HPSEDC FRS, and that the design has been realised in a working, UAT-tested system. M/s HTIS Telecom Private Limited submits this document to HPSEDC for **design approval** and the consequent release of the **first 40% installment** under Work Order HPSEDC-SOFT/08/2025.
